

## **EXLADE Has Password Protection All Locked Up**

*“June 3, 2005: EXLADE has released Disk Password Protection 4.0”*

Formerly produced under the name HDD Password Protection, the latest version of this storage media privacy controller has been unveiled as Disk Password Protection. The program has received numerous refinements, including increased protection with cryptographic data encryption algorithms, new support for removable media including Flash drives and USB external drives, and a redesigned interface. Importantly, users can now specify a password hint, and EXLADE has made the functionality of Disk Password Protection available to other applications through SDK capability.

Disk Password Protection offers password-protected startup of boot functions, read/write operations for partitions and the hard drive.

These and other features of Disk Password Protection 4.0 are described at <http://www.exlade.com/products/diskpasswordprotection/>.

EXLADE offers 30 days to evaluate the demo version of this software.

Licensing includes priority technical support and free updates.

Pricing for personal licenses begins at USD \$49.00, with business licenses starting at USD \$69.00.

Volume discounts are available; visit <http://www.exlade.com/purchase/> for details.

A Microsoft Windows 98/NT/ME/2000/XP/2003 operating system is required.
